

The arrow above can be used as a template when converting the headlights of a Toyota Sera for right-hand traffic.

Print this page and cut out the arrow. Transfer it to a piece of metal and cut that out as well. Use high temperature resistant adhesive (e.g. special silicone) to affix the metal strip to the right side of the shield behind the headlight's lens. You need to do this on both sides of the car.

IMPORTANT: Make sure you have „Fit to paper“ unchecked when printing this PDF!
